

Feeding schedule Schils Calf Milk Replacer (automatical feeding)

Age	Gram + 1 L water	Liter/day	Remark
Day 1-2	Colostrum	up to 4 times	Quick, Quality & Quantity
Day 3-7	150	2 – 3 times	From day 5: water
2 – 3 weeks	150	Build up from 4 L/day to 6 L/day	Water, Concentrate, Hay/straw
4 – 7 weeks	150	Continuous 6 L/day	Water, Concentrate, Hay/straw
8 – 10 weeks	150	Reduce from 6 L/day to 0 L	Water, Concentrate, Hay/straw

Important:

- In the case of automatical feeding, we recommend to mix 150g + 1 liter of water
- Mix CMR at a water temperature of 45° - 50°C
- Optimal drinking temperature: 38° to 42°C
- Offer fresh, clean water every day. Do not place the water source directly next to the drinking machine!
- Calibrate the drinking machine once a month and change a broken teat in time.
- If environmental temperature <0°C, increase feed quantity with approx. 10% per calf/per day.

The feeding schedule is a recommendation. The development and the condition of the animals is the most important indicator!!
